NON-SURGICAL FACIAL REJUVENATION

Fotona4D® SP Dynamis

Fotona's SP Dynamis laser system is designed to perform all major aesthetic treatments. Combining two complementary laser wavelengths, SP Dynamis functions as a versatile, multi-purpose aesthetic platform capable of delivering an extensive range of treatments in aesthetics, surgery, and gynecology. Fotona's Nd:YAG wavelength effectively reaches the deepest layers of the skin, while the Er:YAG wavelength is ideal for correcting surface imperfections to achieve visually appealing, long-lasting results.

FACIAL LIFTING WITH LASER OR LIQUID FACELIFT

Non-Surgical Facial Rejuvenation for Women and Men

Advantages of Fotona4D®:

- Tightening and volumizing without the need for fillers or toxins
- A complete lifting treatment from the inside out
- Instant rejuvenation, firming, and radiance
- Improved skin tone
- Minimal or no downtime
- No surgery, needles, or anesthesia
- **Facial Botox Applications**
- **Mesotherapy**
- **Spider Web Technique**
- **Liquid Facelift**

Women's Health and Urogynecology Solutions

Modern medicine offers effective solutions for both aesthetic and functional concerns in women's health. Urogynecology, vaginal laser treatments, genital aesthetics, and HPV vaccines are among the key approaches that enhance quality of life.

Urogynecology: Urinary and Pelvic Health in Women

Urogynecology is a medical field that diagnoses and treats conditions such as urinary incontinence and pelvic organ prolapse in women.

What is Urinary Incontinence?

Urinary incontinence (urinary leakage) in women is the involuntary loss of urine. This condition can negatively impact both physical and emotional well-being. However, today, many effective treatments are available.

If urinary incontinence is affecting your daily life, do not hesitate to consult a specialist. Early diagnosis and treatment provide both physical and emotional relief.

Urinary incontinence is more common than you think—take action for a solution!

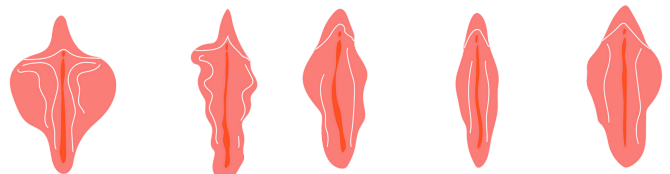

1 in 3 women worldwide experiences urinary incontinence.

Renew Yourself with Modern Medicine!

- Vaginoplasty
- Labiaplasty

Genital aesthetics include procedures that address both functional and cosmetic concerns.

Vaginoplasty

Vaginoplasty is a surgical procedure aimed at tightening and strengthening the vaginal canal. It is commonly performed to correct vaginal laxity caused by childbirth, aging, or genetic factors.

Labiaplasty

Labiaplasty is an aesthetic procedure that reshapes, reduces, or improves the appearance of the inner or outer labia (labium). It is preferred for correcting asymmetrical, large, or sagging labia, providing both aesthetic and comfort benefits.

Vaginal Laser Treatments:

Restorative and Rejuvenating Solutions

Vaginal laser treatment is an innovative, minimally invasive procedure used in women's health and aesthetics.

This treatment aims to rejuvenate, tighten, and improve the functionality of vaginal tissues. It offers a non-surgical solution, providing effective results in a short time.

Advantages of Vaginal Laser Treatment

- A non-surgical and quick solution
- Long-lasting effects
- Minimal risks and side effects
- Positive impact on sexual health and daily comfort

Improve your vaginal health with Lazer Smooth treatments!

- Urinary Incontinence Treatment
- Vaginal Tightening Treatment
- Pelvic Organ Prolapse Treatment
- Vaginal Dryness / GSM Treatment

Laparoscopy

Hysteroscopy

Modern Methods in Women's Health

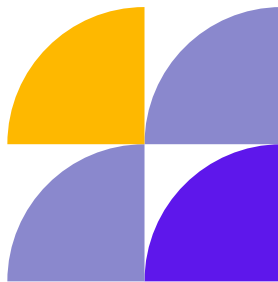

Laparoscopy and hysteroscopy are minimally invasive methods used for diagnosing and treating gynecological conditions. These techniques ensure a more comfortable and safer surgical experience.

What is Laparoscopy?

Laparoscopy is a surgical procedure that uses a thin, camera-equipped tube (laparoscope) to examine or treat internal abdominal organs.

What is Hysteroscopy?

Hysteroscopy is a procedure that uses a thin, camera-equipped device (hysteroscope) to examine or treat the inside of the uterus.
